

Mint data. Better advice.

Five days. One messy SME administration. A working tool that an advisor would actually trust.

KICKOFF BRIEFING

Monday · 09:00 · Wamberg 35b

WELCOME TO THE HACKATHON WEEK

One week. One problem. One real product.

You're here to show what you can really do with AI in a finance context — solo or in pairs, building a deployed online tool that holds up under real-world scrutiny.

BRIEFING

Monday 11 May, 09:00

Wamberg 35b, Amsterdam

SUBMISSION

Friday 15 May, 15:00

FINALE & DRINKS

Friday 15 May, 15:30 – 19:00

WHO WE ARE

A modern financial back office, scaling up for the SME of tomorrow.

01 Accounting	02 Tax	03 Payroll	04 Advice	05 Financing
-------------------------	------------------	----------------------	---------------------	------------------------

WHERE WE SIT

Future-ready partner to a modern SME field — running the financial machinery **and** the advice that sits on top.

THE OPENING

We see real challenges — and real opportunities to use AI better. The incumbents aren't delivering. Time to **take matters into our own hands**.

PART ONE

Why this, why now.

Five forces that used to live in their own corners are converging. The window to build for it is open right now.

THE CROSSROADS

Five forces, enabling next level finance.

01 Data

Banking, ERP, payroll,
invoicing — finally
machine-readable.

02 No more silos

APIs and integrations
stitch the fragments
back together.

03 AI capability

Reasoning, classification
and code-generation
that finally work on
numbers.

04 Advisory

Clients want
explanations and
decisions, not just
reports.

05 Speed

What used to take a
quarter can now happen
in a meeting.

Finally, all five live in one workflow — and intelligence sits at the fingertips of an experienced advisor.

THE SHIFT

From hours of digging to seconds of insight.

BEFORE

Hours.

Pull statements. Reconcile balances. Build the report. Track down the missing invoice. Format the table. Find the error. Try again.

An advisor's morning, every quarter.

AFTER

Seconds.

Ask the question. The system gathers, reconciles and explains — sourced back to the original transactions, with assumptions visible.

An advisor's actual conversation.

FROM DATA, ADVISORS CAN SPEAK TO —

Everything revolves around the figures.

CORE FINANCIAL

Financial performance

Macro & micro trends, benchmarking

Cash, working capital & liquidity

Forecasting & scenarios

Strategy & capital allocation

ADJACENT ADVISORY

Mortgages

Insurances

Investments & wealth

Credit lines & loans

Benefits & tax planning

BEYOND THE REAR-VIEW MIRROR

Forecast what's next. Judge the strategy behind it.

Look ahead

Rolling forecasts, scenario planning, runway and liquidity — built directly off the underlying ledger, not a spreadsheet copy.

Foresight

Judge the path

Test strategies against the numbers. Pricing, headcount, expansion, acquisition — all stress-tested before the call is made.

Judgement

THE VISION

The 360° advisor.

One advisor, every angle covered — performance, forecast, tax, financing, wealth — backed by intelligence that's always one question away.

THE WINDOW IS OPEN

Now is the moment to get ahead.

Secure a place in the future — enabling advisors to step up their game, go 360°, with everything they need at their fingertips.

PART TWO

But finance is messy.

Before any of that future shows up, there's a hard, unglamorous job sitting on every advisor's desk.

Garbage in = garbage out.

Accountants and controllers do the hard work behind the scenes — cleaning incomplete administrations, gathering missing information, resolving open items, correcting timing, clearing balances — before any reporting begins.

WHAT "MESSY" ACTUALLY COSTS

Small gaps. Worthless outputs.

5%

Revenue is off.

A few statements never made it in. Sales is understated by five percent.

RESULT

Your advice on next steps is 100% worthless.

CAPEX

...is understated.

A capitalised invoice booked as opex.
Depreciation drifts. The asset base is wrong.

RESULT

Throw away your fancy 12-month rolling forecast.

THE NEXT STEP

Mint data. Then the doors open.

Trustworthy, explainable, usable.
Done efficiently — but always 100% reliable.
That is what unlocks every layer of advice on top.

NON-NEGOTIABLE

Efficient, but always 100% trustworthy.

If your AI doesn't know something, it should say so. If it makes assumptions, those should be visible. If it gives advice, it should be grounded in the data.

PART THREE

Your case.

A typical SME administration in Exact Online — the kind of package handed over by a client, not yet ready for serious advice.

WHAT YOU'LL RECEIVE

A typical SME administration package.

IN EXACT ONLINE

► **/administration**

general ledgers

balance sheets and P&L statements

AR Aging

AP Aging

► **/banking**

Bank statements

► **/invoices**

Sales invoices

Purchase invoices

► **/supporting**

tax

assets

Not finished.

Open items. Missing statements. Timing differences.

Not fully cleaned.

Mis-bookings, suspense accounts, draft entries.

Not ready for advice.

Real, but not yet trustworthy. That's where you come in.

YOUR MISSION

Make finance AI-ready.

There is no fixed feature list. No predefined path. You're given a realistic finance problem space and asked to decide what matters most.

Pick your angle — data quality, reconciliation, insights, forecasting, advisory support — or something we haven't named yet.

THE ONLY HARD REQUIREMENT

Build a working, deployed online tool that represents a real step toward the future of AI-enabled finance advisory.

POSSIBLE ANGLES

Data quality & cleanup

Closing readiness

Reconciliation

Insights & benchmarking

Forecasting

Advisory copilot

Or your own angle.

WHAT GOOD LOOKS LIKE

Strong submissions show clear thinking – not just shine.

01

Understands the mess

You can name what makes the administration unreliable, and where.

02

Smart use of AI

AI added where it adds real value — not superficial vibe-coding.

03

Reasoning & explainability

Every output is traceable to the underlying data and logic.

04

Facts vs. assumptions vs. advice

The product respects the difference, and shows it.

05

An advisor would use it

Real workflow fit. We'd put it in front of a client.

Says when it doesn't know

Hallucinations on numbers are a hard fail.
Honesty wins.

HOW WE JUDGE

Five lenses. We'll use all of them.

01	Data modelling & validation	STRUCTURE · EDGE CASES · CONSISTENCY
02	Reliability	ROBUST UNDER REALISTIC USAGE
03	Explainability & traceability	OUTPUTS TRACED BACK TO DATA & LOGIC
04	Responsible AI	NO HALLUCINATED NUMBERS OR ADVICE
05	Product value	WOULD WE TRUST IT IN FRONT OF A CLIENT?

IV

PART FOUR

The week.

Five days, one expert session, one finale.
Here's how it runs.

11 — 15 MAY 2026

The week, end to end.

Mon 11	Briefing & case reveal · build starts	09:00 · WAMBERG 35B
Tue 12	Heads down — explore, prototype, decide your angle	ALL DAY
Wed 13	Expert session · 1 per team · via Teams	SLOT BOOKED SEPARATELY
Thu 14	Build & harden — turn prototype into product	ALL DAY
Fri 15	Submission · Finale · Drinks	15:00 · 15:30 — 19:00

WEDNESDAY — 1 SESSION PER TEAM

You get **one** expert session.

One slot. One financial expert. Via Teams.
Make it count — bring sharp questions, not status updates.

It's not obligatory to use the session.

PREPARE LIKE THIS

Know your angle — be specific about the problem you're solving.

Bring a working prototype or screen, not just slides.

List your top 3 unknowns about finance reality.

Ask about edge cases, not generalities.

Validate assumptions you'd otherwise guess at.

RULE OF THUMB

If you can google it, don't ask it.

Questions to ask can be in the line of:

- Would it be useful for you as an accountant if the tool could do X or show Y?
- Is my understanding of X correct in terms of financial statements for a B.V. company?

GROUND RULES

A few practical things.

€25

External tooling allowed.

You can use software that helps you launch the product. Each team can claim up to **€25 reimbursement** for paid tools.

git/

Gather your code in GitHub.

A designated repo is shared right after the kickoff. Push early, push often.

API

Keys live in the dataroom.

Exact Online and Claude credentials are handed out via the dataroom — keep them private.

PRO TIP — CLAUDE USAGE

Mind your tokens.

Long chats burn through tokens fast; coding via the API is much more efficient. There's a per-account ceiling — stay out of the chat UI when you can.

+

Bring your own coding tools.

Use your preferred setup. Claude is provided so every team starts on a level playing field.

FRIDAY 15 MAY

The finale – short, sharp, real.

SUBMIT

15:00

Working, deployed, accessible by
URL.

PITCH & DEMO

15.30
< 10 min

Show and sell the working product.
No slideware about what it could
become.

DRINKS

16:30 –
19:00

Discuss, Celebrate, Decompress.
Same building.

FOR THE WINNING TEAM

Prize.

Cash and credits — but the real reward is shipping something we'd actually want to put in front of a client.

CASH

€ 1.500

PLUS

1 year of Claude Pro

Make the future of finance AI-ready.

AI won't replace accountants and advisors. It will amplify the ones who combine messy real-world data, sound financial reasoning and intelligent systems into a product that can actually be trusted.
